Vasai (East), Dist. Thane - 401 208, INDIA. **Tel.:** +91-250-6453322 (8 Lines)

E-mail: sales@libertyvalves.com | **Website:** www.libertyvalves.com

LIBERTY VALVES PVT. LTD. Set up in 1965, is one of the leading manufacturers of all types of Industrial Valves like, Ball Valves, Gate Valves, Globe Valves, Check Valves, Butterfly Valves, Piston Valves, Needle Valves, Plug Valves, Strainers, Etc. under the Brand Name **LIBERTY®** & **LVPL**. Liberty has been serving the Oil Industries, Petroleum Industries, Pharmaceuticals, Chemicals & Fertilizer Industries with **Size range from 6mm to 1200mm** and **Pressure Rating upto 2500#** to Indian & International Market.

LIBERTY VALVES Quality Management system has been certified to ISO 9001-2008 Liberty Ball Valves are Fire Safe certified by M/s. DET NORSKE VERITAS as per API 6FA Standards. We recognize the importance of valve quality for safety and protection of personnel health & property. It is our quality commitment to focus our resources to provide our customers with first class products at a competitive price, designed, manufactured, inspected & tested in accordance with our customers specifications and complying with all International Standards.

BALL VALVE DESIGN FEATURES

VALVE DESIGN

Design generally conforms to ASME B16.34 / API 6D / BS EN ISO 17292 (BS 5351)

FLOATING & TRUNNION MOUNTED BALL

Liberty Manufacture both floating and trunnion mounted ball valves. Floating ball design is a standard design, where sealing takes place by allowing the ball under pressure to move towards the downstream seat to affect a tight seal. The floating ball design is the universal choice for most process and utility applications.

For higher sizes and pressure ratings & for special services that require Double –Block and Bleed features, trunnion-mounted ball valves are preferred by users.

DOUBLE BLOCK & BLEED

Each seat shuts off the process media independently on the upstream and downstream side of the ball, allowing double block operation. When the pressure is simultaneously applied to both sides of the ball in the closed position, the valve bore and the body cavity will be isolated from each other, and the pressure within the body cavity can be released through the drain plug.

PTFE SEATS WITH SLOTS

PTFE / RPTFE seats are provided with slots to relieve the pressure past the upstream seat and prevent it from being forced against the ball. This seat design provides tight shutoff at high and low pressure, reduce wear and valve torque.

BLOW-OUT PROOF STEM WITH ANTI-STATIC DEVICE

A Spring Loaded Pin assures the electrical continuity between the ball, stem and body, to avoid sparking during the turning of the stem to open and close the valve. The blow out proof stem operate the valve safely even at high differential pressure. A bottom stem seal enabling replacement of Gland packing even the valve may under pressure.

EMERGENCY SEALANT INJECTION SYSTEM

Ball valve 150MM & above shall be provided an emergency sealant injection system if required by customer. The lubricant & Sealant fittings are located near seat & at stem neck. When the sealing materials (Soft Seat Ring or Stem O Ring) are damaged by fire or some other accidental causes, the seat and stem leakage can be prevented by the injection of sealant into these fittings.

FIRE SAFE DESIGN

Fire safe valves are designed and tested to the requirements of API 607, API 6FA and BS 6755 Part II specifications. Fire safe design valves are provided with an integral secondary metal to metal seat that protects the leakage from the seat in case of decomposed or deteriorated of soft seat during the fire. Fire safe stem packing & Gaskets are used to avoid the body leakage after the fire.

ISO 5211 MOUNTING PAD

Top flange is designed as per EN ISO 5211 for direct mounting of actuators and Gear operators.

ENGINEERING DATA (BALL VALVE)

PRESSURE - TEMPERATURE GRAPH

T - PTFE
R - 15 % Glass filled PTFE
J - 25% Glass filled PTFE
P - Carbon filled PTFE
N - 33% Carbon filled PTFE
L - PEEK (Virgin)
Y - Delrin (Acetal Resin)

SEAT APPLICATION

T PTFE

Inert to most chemicals, low coefficient of friction, recommended for water, foodstuff and corrosive chemicals.
Colour: White

R 15% glass filled PTFE

Withstands higher pressures than virgin PTFE. Good resistance to wear and deformation under load.
Colour: Off-White

J 25% glass filled PTFE

Similar to 15% glass filled PTFE seats but better resistance to wear and deformation under load.
Colour: Gray-White

N 33% Carbon filled PTFE

Specially for steam and vegetable oils, low coefficient of friction.
Colour: Black

P Carbon filled PTFE

Specially for steam and thermal oil, low coefficient of friction, inert to most media.
Colour: Pale Black

Y Acetal Resin(Delrin)

Suitable for high pressures, good resistance to wear and deformation under load, temperature limit 80° C. Must not be used in presence of oxygen.
Colour: Creamy White

L Virgin PEEK

Similar to filled PEEK but higher coefficient of friction, suitable for nuclear, Tobacco, FDA and clean applications.
Colour: Beige

NOTE :- THE FLOW COEFFICIENT 'CV' VALUE IS THE FLOW RATE OF WATER (gallons/min) THROUGH A FULLY OPENED VALVE, WITH A PRESSURE DROP OF 1 Psi ACROSS THE VALVE.
ALL SIZES ARE FULL PORT.

ACCESSORIES

Other additional accessories can be provided with the valve as per requirement

1. SOLENOID VALVE

2. MANUAL OVER-RIDE

3. POSITION INDICATOR WITH LIMIT SWITCH BOX

4. I/P (CURRENT TO PNEUMATIC) TRANSDUCER

5. PNEUMATIC VALVE POSITIONER

6. MOUNTING BRACKETS

7. FILTER + REGULATOR + LUBRICATOR UNIT (FRL)
